PROFESSIONAL PROFILE

I'm a full-stack developer with a university-level technical qualification in Computer Application Development from UNICEN's Quequén campus. I build web and mobile applications, working across user interfaces, backend services, authentication, APIs, databases, and deployment. I enjoy building software that is easy to use, maintainable, and designed around people's needs.

WORK EXPERIENCE

Full-Stack Software Developer | Unit0 Studio · October 2025 – May 2026

At Unit0 Studio, I developed custom web and mobile applications for contact management, appointment scheduling, and messaging, along with their backend services and integrations.

- Built a contact management web app with email addresses, phone numbers, and notes, allowing users to register and sign in with Google.
- Developed a mobile app for car wash bookings, with appointment scheduling, Google sign-in, and booking data stored in Firebase.
- Built a system for storing incoming WhatsApp messages and a chat interface for sending replies and keeping a conversation history.
- Implemented backend services and integrations, including APIs, authentication, data storage, and webhooks, to support these web and mobile applications.

SELECTED PROJECTS

Anthos

A web app for organizing garden care. It includes a daily schedule for watering, fertilizing, pruning, and plant treatments, with watering adjustments based on the season and rainfall. Features plant profiles with photos, a garden map, a care history, and reminders. Stack: TypeScript, Next.js, React, Prisma, SQLite.

AI-powered recipe library

Turn recipes from websites or spreadsheets into structured ingredients and instructions with AI (OpenRouter). Search your collection and choose between a traditional recipe view and a cooking workflow that shows which steps can run in parallel and which depend on others. Stack: Next.js, TypeScript, Prisma, Zod, OpenRouter, Docker.

Local historical memory map (PSE UNICEN Quequén)

An interactive map of sites of remembrance in Necochea and Quequén. Choose a starting point, explore thematic layers, and discover the history behind each location. Stack: JavaScript, HTML5, CSS.

TECHNOLOGIES

Languages: TypeScript, JavaScript, Java, PHP

Web frontend: React, Next.js, Angular, Vite, Material UI, Emotion, React Router, Apollo Client, HTML5, CSS, Tailwind CSS, Google Maps JavaScript API

Mobile: React Native, Expo, Expo Router, React Native Paper, React Native Maps, Reanimated, Gesture Handler

Backend & integrations: Bun, Hono, Node.js, Express, Spring Boot, GraphQL Yoga, GraphQL, REST APIs, Webhooks, OpenRouter, Zod

Data & persistence: Prisma, SQLite, PostgreSQL, Sequelize, JPA/Hibernate, SQL, NoSQL, JPQL, JSON Storage

Cloud & authentication: Firebase, Firebase Admin, Firebase Auth, Firebase Cloud Messaging (FCM), Auth.js, Google OAuth, Google Cloud, Google Cloud Storage

Infrastructure & deployment: Docker, Docker Compose, Git, GitHub, Nginx, Netlify, EAS, Ngrok, VPS

Tools & analytics: Google Analytics 4, Sentry, ESLint, IntelliJ IDEA, Cursor, GitHub Copilot, Google Antigravity, OpenAI Codex

EDUCATION

National University of the Center of the Province of Buenos Aires (UNICEN), Quequén campus

University-level technical qualification in Computer Application Development | 2022 – 2026 · Average grade: 7.79 · Status: Completed.

Systems Engineering | 2021 – 2022. Interrupted due to a change in the study plan.

LANGUAGES

English: A1 level, basic technical reading.
